

Example

Problem

□ Solve the following recurrence by master theorem. If it cannot be solved by master theorem, just mark N/A.

$$1) \quad T(n) = \sqrt{2} \times T\left(\frac{n}{2}\right) + \log n$$

$$\Theta(\sqrt{n})$$

$$2) \quad T(n) = 0.5 \times T\left(\frac{n}{2}\right) + \frac{1}{n}$$

N/A
